^a The relay module must have an earth ground providing a connection between the subbase and the control panel or the equipment. The earth ground wire must be capable of conducting the current to blow the 20A fuse (or breaker) in event of an internal short circuit. The relay module needs a low impedance ground connection to the equipment frame which, in turn, needs a low impedance to earth ground.

^b 2000 VA maximum connected load to relay module.

^c See Tables 3 and 4.

^d 220 to 240 Vac application. Requires 220 to 240 Vac to 120 Vac, 10 VA stepdown transformer to operate the shutter.
